

TECO aims to give new opportunities of sharing experiences and starting up collaborations between EU and India by stimulating research centres, private industries, SMEs and public institutions to implement thematic networks and activate people exchange programmes.

Mobility is financially supported by providing monthly grants.

Activities are mainly focused to the development of new ideas in the field of technologies applied to the improvement of water and soil quality.

Calls for proposals are regularly published in the website: [www.tecoproject.eu](http://www.tecoproject.eu)

Technological  
Eco-Innovations  
for the Quality Control  
and the Decontamination  
of Polluted Waters and Soils

Project co-funded by the European Union

## OVERVIEW

The impact of industrial development on the environment is often severe and many times dramatically destructive.

Today, the technologies based on a better understanding of natural processes and the discovery of new materials and analytical techniques help to recover critical situations due to the over-exploitation of natural resources.

TECO is dedicated to the implementation of EU-India exchange of experts and innovators in the field of technological eco-innovations applied to the improvement of the quality of polluted waters and soils.

## ACTIVITIES

- Activation of mobility programmes and financial support to EU citizens who wish to visit India to develop new projects.
- Networking management, web coordination, match-making of request and opportunities, organization of conferences in EU and India.
- Addressing of obstacles and challenges, review and organisation of consultations with all stakeholders.

## OUTCOMES

- EU-India joint research development and involvement of both public and private sectors.
- Stronger partnerships and start-up of new collaborations between EU and India.
- General improvement of public-private dialogue.
- Networking, information sharing and partnerships among target groups and stakeholders.

## TECO GOALS:

- boost collaborations between EU and India in the field of environmental studies and technological innovations for the decontamination of polluted waters and soils;
- stimulate new opportunities to deliver innovations which are able to provide solutions for local contexts even through a reinforced link between research and public institutions;
- Involve in the activities a wide network of people through their participation to workshops and conferences.
